

got questions about  
antifreeze?

***we have answers!***

• **what is antifreeze/coolant?**

Antifreeze/coolant conducts heat from the engine to the radiator and heater core while protecting from boil-over, freeze-up and corrosion.

• **what does it protect?**

In addition to the engine, proper coolant levels protect against corrosion and help lubricate your water pump.

• **what's it made of?**

The chemical in most antifreeze/coolants is ethylene glycol.

• **is the formula always the same?**

Original equipment antifreeze is over 95% ethylene glycol, but car manufacturers use slightly different additives and dyes. Universal antifreeze is compatible with all original equipment antifreeze.

We're ready in Advance.

For more information on how to use the products you've selected, be sure to stop by the Consumer Education display in the front of the store. Here are some brochures you may find helpful:

**WHAT'S RIGHT FOR ME?**

answers about  
**ANTIFREEZE**

- *antifreeze*
- *coolant*
- *extended-life antifreeze*
- *animal-safe products*

We're ready in Advance.

# the right product makes all the difference

## **antifreeze keeps your engine temperature just right!**

*In your car, antifreeze/coolant works to prevent your engine from freezing up or overheating in extreme climates. As the outside temperature rises and falls, antifreeze/coolant is circulated throughout the engine block to maintain optimal internal operating temperature.*

- **why do I need to change my antifreeze/coolant?**

You should change your antifreeze/coolant regularly because it:

- loses its effectiveness over time
- picks up contaminating particles from your car's cooling system
- ensures your vehicle's engine receives maximum protection
- prevents corrosion damage to cooling system components.

- **how often to I need to change my coolant?**

Consult your owner's manual for the recommended change interval. Most guidelines suggest flushing your cooling system and replacing conventional coolant every 1 to 2 years. Extended life antifreeze can last up to 5 years.

- **what do I need for my car?**

Always check your owner's manual for coolant information.

For protection to -34°F, try Prestone pre-mixed 50/50 or Advance Auto Parts antifreeze/coolant, which can be poured directly from the bottle.

If you prefer **animal-safer** antifreeze/coolant, use Prestone LowTox Antifreeze/Coolant. It's less toxic to pets and wildlife if ingested. Be sure to check your owner's manual to determine if propylene glycol-based antifreeze/coolant is approved for use in your vehicle.

GM cars that require **DEX-COOL**® coolant (GM owners, check your owner's manual), use Prestone 5/150 Extended Life antifreeze/coolant.

And be sure to check out **Advance Auto Parts brand** antifreeze/coolant, which can be used in all makes and all models and mixed with any color antifreeze.

**Color before adding new universal formula.**

**Mix with any type or color antifreeze!**

- **New formula for ALL makes and models!**

- **Mix with ANY type or color antifreeze!**

- **Will not change the color of your antifreeze!**

- **quick guide to choosing the best antifreeze/coolant for you.**

While there are a lot of products out there, you can trust these to keep your car from running too hot or too cold. If you have any questions, consult your owner's manual or ask an Advance Auto Parts Team Member.
